

mbl 120 - Time to rethink...

It is evident that with the new mbl Radialstrahler 120 the world of hi-fi has to rethink and let go of its prejudice that only huge and mighty speakers can present music in its full nature and relaxed sovereignty.

We succeeded in transferring the revolutionary chassis concept used for the Radialstrahler mbl 116F and mbl 111F to a noticeably smaller loudspeaker.

By positioning both long through lower mid bass units, aligned in a push-push order, on a massive aluminum block there are no resonances carried over to the cabinet, which is made of best materi-

als. A filter that was especially designed reduces the chassis's displacement and at the same time it enables for level increase.

Therefore the entire energy remains in the music and the mbl 120 whips up a precise and voluminous bass, in a way that can hardly be experienced even with much larger loudspeakers.

Any music will catch you with an overwhelming natural and fascinating three-dimensional reproduction. This is the domain of the improved midrange unit and tweeter. This Radialstrahler, developed exclusively by mbl and valu-

ably hand-crafted, acts faster than any common chassis thanks to its superior technology – and it lets you experience music in unimagined homogeneity and naturalness.

With the mbl 120 you can build up two-channel systems and surround systems of highest quality. Here we support you with visually and technically suitable loudspeaker stands that allow for nearly invisible wiring by routing the cables inside the stands. A special center speaker version of the mbl 120 is available as well.

Experience the mbl 120 and revise your opinion, too.

Woofer	push-push 2 x 6.5 inch
Midrange	Radial MT50, CFK (MBL)
Tweeter	Radial HT37, CFK (MBL)
Acoustic Center	42 inch
Cabinet Volume	20 liter
Weight incl. speaker stand	61.7 lbs
Dimensions (WxDxH)	11.8 x 15.3 x 23.6 inch
Height incl. speaker stand	48.4 inch (incl. cover)
